

# Fitts' law

## *Week 2*

Grete Liis Reimand  
au763212@uni.au.dk

# Agenda

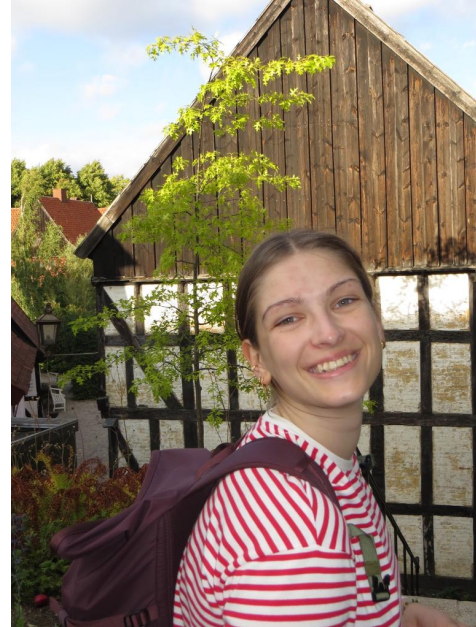

- Introduction
- Collaborative docs
- GitHub repo
- Fitts' law experiment
- Data analysis
- Real life examples of Fitts' law

---

# Hello :)

- Grete
- 5<sup>th</sup> semester BSc CogSci

- Contact: [au763212@uni.au.dk](mailto:au763212@uni.au.dk)

# Expectations

## What I expect of you

- that you ask all the questions you have
- that you participate and give me feedback on how it's going

## What you can expect of me

- that I will answer your questions (or find an answer if I don't know it)
- I'm here to make this experience as good as possible for you guys

# Collaborative brainstorm docs

(can be found on BS under Exam inspiration)

At the end of class write down any thoughts/ideas/experiments which can be used at the end of the semester when choosing an exam topic

Search titles, descriptions

► General information

▼ Exam inspiration

Collaborative brainstorm  
docs

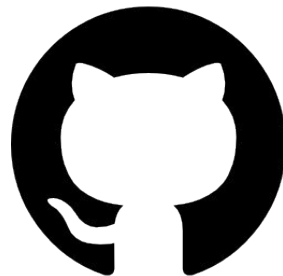

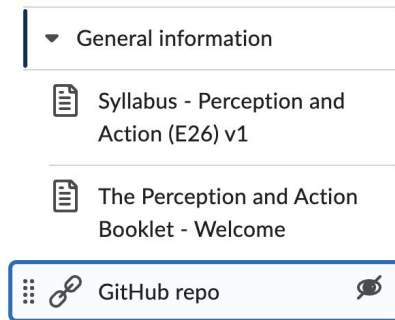

# GitHub repository

(can be found on BS under General information)

All the code and data files will be shared in this GitHub repo

If you have any trouble with GitHub, I hopefully know how to help : )

# Fitts' law experiment

1. Go to this website:

<https://www.csfieldguide.org.nz/en/interactives/fitts-law/>

and complete the experiment

2. Download the data and copy it into the shared sheet on Brightspace (give yourself a random ID)

|                                  |     |
|----------------------------------|-----|
| 762.9                            | 277 |
| 645.6                            | 92  |
| 305.9                            | 185 |
| 605.2                            | 185 |
| 306.9                            | 277 |
| 544.8                            | 277 |
| <div>Download table as CSV</div> |     |

---

# Fitts' law experiment

On GitHub (and BS today) there is a very simple analysis file just to show the results of the experiment

The solutions are already up on GitHub (however it's a good practice exercise to get back to using R so I encourage you to try yourself first)

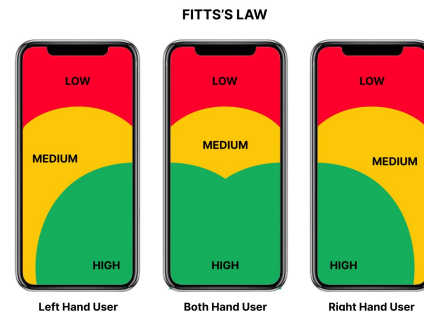

---

# Fitts' law examples in real life

Used heavily in UX design:

1. targets should be big enough
2. targets should have enough room between each other
3. targets should be in easily acquirable areas

---

# Wrapping up

Spend 5 minutes at your table coming up with any experiment ideas and add them to the brainstorm docs

See you next week!
